Overview

1

Security is still treated as a late-stage activity rather than a design-time decision

2

Threat modeling is manual, inconsistent, or not scalable across teams and projects

3

Executives lack visibility into security risk posture and remediation progress

Timeline

Sprint 1

Overall planning,
definition of user stories,
goals and components
architecture of the
platform

Sprint 3

Keycloak, Tests
Implementation,
CI/CD workflows,
Feature Toggling

Sprint 5

ChatBot

Sprint 7

Presentation
preparation

Sprint 2

Initial setup of the
environment to start
developing
Development of the
first features

Sprint 4

Observability and
refactor IaC to
terraform

Sprint 6

Elaboration of the
final report

Requirements

Sarah Chen

- Senior Security Architect at a mid-sized financial services company
- Leads threat modeling efforts across multiple development teams

Goals	Challenges
Create and manage consistent, repeatable threat models	Managing multiple threat models across systems and projects
Proactively identify security risks early in the SDLC	Ensuring consistency in threat identification across the organization
Generate clear security requirements and mitigation guidance for developers	Communicating complex security risks to non-technical stakeholders

Requirements

Mike Rodriguez

- Full Stack Developer at a fast-paced e-commerce company
- Primary focus on feature development, performance, and usability

Goals	Challenges
Understand security threats relevant to the features he is building	Limited time to focus on security due to delivery and sprint deadlines
Implement secure code using clear, actionable mitigation guidance	Difficulty translating complex security terminology into code-level actions
Get fast answers to security questions without disrupting development flow	Keeping security considerations top-of-mind during active development

Requirements

Jennifer Park

- IT Project Manager at a healthcare technology provider
- Responsible for delivery timelines, resource planning, and stakeholder reporting

Goals	Challenges
Quickly understand project risk posture without deep technical detail	Limited technical background to interpret detailed security findings
Track progress of threat mitigation and security-related tasks	Balancing security requirements with project deadlines and budget
Use risk insights to inform scheduling, priorities, and resource allocation	Translating technical security risks into business impact

Requirements

David Thompson

- Compliance Officer within a financial services regulatory environment
- Responsible for validating security practices against regulatory and industry standards

Goals	Challenges
Review threat models and security documentation as part of compliance audits	Verifying that documented security controls are actually implemented
Ensure security decisions and risk treatments are clearly documented	Ensuring traceability and auditability of security decisions over time
Demonstrate that identified risks are appropriately prioritized and managed	Producing defensible, regulator-ready audit reports efficiently

Jobs

✓ **deploy**

Run details

🕒 Usage

📄 Workflow file

deploy

succeeded 53 minutes ago in 2m 1s

- > ✓ Set up job
- > ✓ Checkout code
- > ✓ Setup Terraform
- > ✓ **Prepare environment file**
- > ✓ Ensure SSL certificates exist
- > ✓ Start infrastructure services (Database, Keycloak, Flagsmith)
- > ✓ Check infrastructure services health
- > ✓ Update Terraform variables file
- > ✓ Log in to GitHub Container Registry
- > ✓ Pull production images from GHCR
- > ✓ Initialize Terraform
- > ✓ Validate Terraform configuration
- > ✓ Handle existing resources
- > ✓ Apply Terraform deployment
- > ✓ Start Nginx reverse proxy
- > ✓ Wait for Nginx to be healthy
- > ✓ Wait for services to be healthy
- > ✓ Deployment summary
- > ✓ Post Checkout code
- > ✓ Complete job
