Planning

- 14 weeks scheduled for theoretical and practical classes
 - Information in elearning...
 - English language in slides
- Each class
 - ~50% of time: Theoretical and preparation for the...
 - ~50% of time: Practical work
- Each practical work
 - A step-by-step guide (with some “thinking” points for students)

Objectives

- Develop concepts associated to different types of mobile networks
 - Overall perspective of different wireless networks
 - Integration into a future vision, with heterogeneous environments.
 - “5G”-alike world.
 - Focus on networking, system and protocol aspects
 - IT-integration aspects mostly in other subject
 - Students should be able to:
 - understand new technologies and concepts of wireless communications;
 - be able to use their knowledge to react to the current changes in wireless networks
 - understand future mobile network integrated systems;

Program

1. Mobile Communications: Multicast, Broadcast, Radio vs IP
2. Wireless network models: IEEE802 architecture, Wi-Fi, Bluetooth
3. (Wide) Wireless Sensor networks: ZigBee, LoRa, SigFox
4. Mobile Networks and associated systems, Satellites
5. Mobile Communications systems evolutions: the Future!

Evaluation criteria

- Theory: 50%
 - Exam at the normal season
 - Final exam (a.k.a. exame de recurso) will contain all subjects as well
- Practical: 50%
 - 40%: Written mini-test about the practical works and its subjects
 - 10%: Special assignment (TBD)
- Minimum grade: 7

Organization

- All information to be displayed in e-learning
 - Announcements
 - Classes handout
 - Practical works
 - Evaluation and grades
- Summaries in PACO.
